

Please fill out and send in this form with your iSeries Tank Monitoring panel to have your software upgraded to the version 2025-6X2-1. **Please ship to the above address attn: Software Upgrade.**

***Do not cut the wires. Simply pull the panel out of the wiring harness connector slid onto the circuit board.***

There is a small hardware upgrade fee of \$10 as we will need to replace the IC on the circuit board because the old one is too small to have the new program installed.

If you would like all your data transferred from your old panel (Tank names, alarm set-ups, calibration settings, etc.) we can do that for you for \$25 which includes the \$10 hardware upgrade charge. Otherwise, you will need to reprogram your tank set-ups and recalibrate them when your new iSeries panel is returned. Please make a note of how your tanks are set-up currently so you won't have wiring mix-ups when you reset it up.

***\*\*Important Note: If you currently have a propane tank set-up on tanks 5 or 6, it will need to be changed to tank location 7 or 8 on the panel.***
